

Insight Track[®] | Fast Track SA[™]

Drive Thru Timing Solutions

Profit from superior real-time visibility into quick service restaurant drive-thru performance.

Delphi's timing solutions provide businesses with the unique ability to measure their operational efficiency by monitoring several speed of service metrics in the drive-thru. Each of our timers provide real-time data for crew members and management to rely on. Our Fast Track SA and Insight TRACK solutions give valuable, current insight into time-sensitive processes, empowering drive-thru team members to address small problems before they become big ones.

A Timing System for Every Application

Fast Track SA is our stand alone timer system ideal for franchise owners that exclusively want to improve productivity and profits.

Fast Track SA is simple, powerful, and low-cost, featuring Insight Track software functionality and remote control via the Mobile Command Center™ mobile app, without breaking your budget.

Collect comprehensive reports providing summary totals for each display period, as well as summaries by daypart, store hours, shifts, and more.

Multiple graphical dashboards are available to show performance metrics including goals, average times, historical performance, and total cars served.

Insight Track is our cloud-based, enterprise level drive-thru timing system, ideal for larger franchise owners looking to achieve enterprise-wide visibility into key performance metrics.

The Focus feature highlights which operation needs the most attention in real time to improve performance. Using impactful indicators and graphs, crew members can quickly see real-time comparisons of “actual results” to “target goals.”

The Score feature encourages competition across multiple stores in a variety of drive-thru performance metrics including speed-of-service, sales, and number of limited time offers sold.

Insight Track helps the drive thru effectively measure, motivate, and reward crew members and managers, based on improvements in “performance results” which can be realized by simply increasing staff awareness of bottlenecks in service workflow.
